## **Automatic Air Vent**

**Bleeding and Venting Valve** 

## CJC<sup>™</sup> Product Sheet - Accessories

## APPLICATION

**The CJC<sup>TM</sup> Automatic Air Vent** is used to release air from the CJC<sup>TM</sup> Filter Housing.

It is controlled by a float-controlled valve closing by rising oil level (bleeding) and opening by falling oil level (venting). Venting can be prevented by using a check valve.

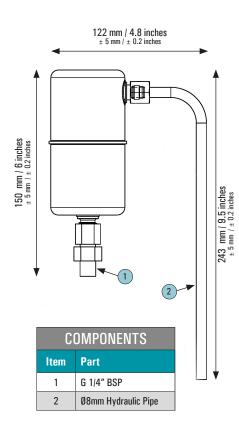

The CJC<sup>TM</sup> Automatic Air Vent reduces the need for supervision and maintenance of the CJC<sup>TM</sup> Filters even further.

## **IDENTIFICATION**

To order the Automatic Air Vent, please use:
