

Comparison:

NP6000sc vs. Phosphax sc

Ortho-Phosphate analyser with robust and lightweight filtration options

NEW!

Features	NP6000sc	Phosphax sc
Low cost of operation with the proven yellow method: The NP6000sc analyser determines ortho-phosphate concentration using the molybdo-vanadate yellow colorimetric method which optimises reagent consumption and helps save on operating costs.	✓	✓
Synchronised maintenance for reduced touchpoints: With fewer touchpoints, reagent replacement and routine user maintenance are now needed just twice per year, saving you time and ensuring smooth operations.	✓	✗
Extended measuring range: By extending both the low and high range, we've made our solution more versatile. This flexibility allows you to tackle a wider variety of applications with a single, reliable device.	✓	✗
Instant insight into your analyser's performance: Our smart status indicator light provides instant visibility into your instrument's health, keeping you informed, helping you avoid downtime and ensuring uninterrupted operation.	✓	✗
Simplified accessibility of reagents: Routine tasks, such as reagent replacement, are now designed for effortless access – streamlining workflows, reducing downtime, and improving operational efficiency.	✓	✗
Integrated compressor and pump for filtration module: Easy installation and less mounting hardware with integrated compressor for filtration module sample pump and compressor consolidated into the analyser.	✓	✗
Grab sample for lab analysis comparison: Eliminate variables like sample filtration, timing, and sample location discrepancies for data consistency between online and lab measurements.	✓	✗
Validation procedure for standard solution: Simplified quality assurance by using standard solution for validation.	✓	✗
Flow detection: Increased confidence in your results with the ability to remotely check that your sample is consistently supplied to your analyser.	✓	✗
Advance Diagnostics – Proactive and Reliable: Maximise uptime with advanced Prognosys diagnostics and guided maintenance workflows. Internal sensors provide proactive alerts, ensuring accurate insights and dependable performance.	✓ Advanced Prognosys	✓ Basic Prognosys
Service protected: A complete portfolio of field service plans to help you protect your investment and peace of mind.	✓	✓
